DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3 and 11, drawn to a control apparatus for internal combustion engine, classified in class 123, subclass 336.
- II. Claims 4-10 and 12, drawn to an intake air amount control apparatus for internal combustion engine with the different timing sets, classified in class 123, subclass 403.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects. Controlling all of the control valves at the same time is different from controlling one of the control valves.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Oliffe's office on May 12, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

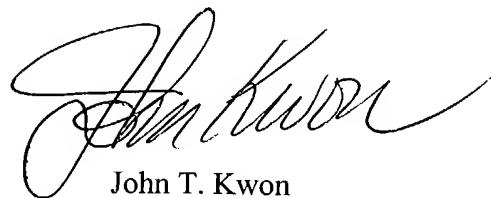

Art Unit: 3747

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
